## COMPLETE CHANDELIER KITS TO COMPLEMENT YOUR SPACE

Unique, modern chandeliers make a bold and sophisticated statement in any space. They are extremely versatile and customizable with the ability to add or remove pendants, move the pendants around, and change-out the pendants in the future. Ordering is easy with just a single item number that includes all required components.

# MONORAIL BASICS

## WHY CHOOSE MONORAIL

A design aesthetic that's simple and lovely combined with incredible flexibility in application makes a MonoRail system the ultimate interior lighting tool. Solve lighting challenges from simple to complex. MonoRail can be configured in thousands of ways for a virtually limitless number of residential and commercial applications.

## ANATOMY OF MONORAIL

For design harmony, all the power, standoff and fixture connections to the MonoRail are shaped identically. MonoRail is hand-bendable and field-cuttable. Each piece of rail is shipped with conductive connectors to join rail pieces end to end. Order additional connectors if cutting and rejoining rails.

## BUILDING YOUR MONORAIL SYSTEM

The first step in designing and building your MonoRail system is determining what it is you are trying to light. Decide where to install the fixtures so the light goes where you want. Choose fixtures then add the accessories you want. Your MonoRail must be placed so it runs directly beneath the junction box with the surface transformer or power feed canopy. MonoRail systems come in a kit or custom order.

### KITS

For easy ordering, we offer several convenient MonoRail Kits (P. 24) These include every component you need to install a pre-configured MonoRail system in the size and shape of your choice. Simple, straight-forward and ready to go!

### CUSTOM

For those do-it-yourself types, we offer custom orders. Choose every part and feature of your system, then configure it into your own unique installation. Take full advantage of the creativity and flexibility available in MonoRail systems!

## TIPS FOR KEEPING IT SIMPLE

### TIP ONE

To calculate the amount of rail you'll need for an organic shape, draw the MonoRail run to scale (for example, 1/4" = 1'). Use a piece of string to "trace" the drawing. Measure the length of string, then convert from your scale.

### TIP TWO

It is possible to apply both accent lighting and ambient lighting simultaneously on a single MonoRail system, even with design challenges such as steeply sloped ceilings. Combine hanging pendants with heads that rotate and pivot for incredible reach in illumination. Adjustable standoffs align the rail with the floor even if the ceiling slopes.

TIP THREE

To install a MonoRail system on a vaulted ceiling, add a power vault adapter to each power feed and add a standoff vault adapter to each standoff.

POWER VAULT ADAPTER

Installs to the power feed and adjusts to any angle so the rail runs parallel to the floor.

STANDOFF VAULT ADAPTER

Installs between the standoff and the ceiling to position the rail parallel to the floor.

OPTIONAL TO INCLUDE

Power Vault Adapter 700MOPVLT (sold separately from power feed) available in Antique Bronze or Satin Nickel finish. Standoff Vault Adapter 700MOCVLT (sold separately from the standoff) available in Antique Bronze or Satin Nickel finish.

TIP FOUR

Power Feed Canopies work with Remote Transformers to power the light fixtures installed on the MonoRail system. In addition to connecting with the power source, the Power Feed Canopy preserves the overall aesthetic of the system while saving space by keeping wiring out of sight behind its casing.

COMPATIBLE FIXTURES

For design harmony, all the power, standoff, and fixture connections to the MonoRail are shaped identically. Note that standoffs and fixtures can be positioned to cover the joint between two rails to maintain the smooth line. For other MonoRail system options, such as mounting to a vaulted or T-bar ceiling or to a wall, see Special Installations on P. 32.

## STANDARD FINISHES

Containing every component needed to put up a lighting system, Standard MonoRail Kits are available in Aged Brass, Antique Bronze and Satin Nickel finishes. You also choose the Low-Voltage Heads and/or Pendants along with the transformer. Once you make those three simple choices, all other necessary parts are automatically included.

CONTENTS:

Each Standard MonoRail Kit includes:

- (1) 8' long hand-bendable MonoRail
- (2) Sets of End Caps
- (1) Power Transformer of your choice
- (2) Individual Rigid Standoffs (length will vary)

# MONORAIL

The engineering behind MonoRail invites creative customization. Hand-bendable and field-cuttable, MonoRail systems can be formed into straight or shapely lines to light almost any space. Set the mood, complement the surroundings or just provide general illumination by making your own MonoRail system. Solve easy or complex lighting challenges of accent lighting, showcasing artwork or finally finding the lighting to match that one room that never looks quite right. The MonoRail system mounts flexibly and securely to ceiling surfaces, curved or straight. To customize your unique MonoRail system see below.

## DID YOU KNOW?

- MonoRail is hand-bendable and field-cuttable
- Can be installed on a vaulted ceiling
- Can be tailored to fit any space with curves or angles
- Can be used with both heads and pendants for 100+ configurations

## LINKING MONORAIL FOR LONGER RUNS AND SHAPES

When one line of MonoRail isn't enough for your space, just add more! Connect sections of rail to keep the line moving straight or going in a different direction. Choose to keep power flowing through the same line or isolate the new section in its own circuit. When you're done adding on, finish up with a decorative end cap to complete the picture.

### CONDUCTIVE CONNECTORS

Join sections of rail together end to end. Order separately if cutting and rejoining rails. Sold in pairs.

**700MOCCNR** (AGED BRASS)  
**700MOCCNZ** (ANTIQUE BRONZE)  
**700MOCCNS** (SATIN NICKEL)

### ISOLATING CONNECTORS

Join sections of rail and isolate power feeds from each other. Order additional if required by layout. Sold in pairs.

**700MOCINC**

### FLEXIBLE CONNECTORS

Join sections of rail together end to end at desired sharp horizontal angle or desired vertical angle. Sold in pairs.

#### HORIZONTAL CONNECTORS

**700MOCFXHR** (AGED BRASS)  
**700MOCFXHZ** (ANTIQUE BRONZE)  
**700MOCFXHS** (SATIN NICKEL)

#### VERTICAL CONNECTORS

**700MOCFXVZ** (ANTIQUE BRONZE)  
**700MOCFXVS** (SATIN NICKEL)

### END CAPS

Decorative end caps fit into ends of MonoRail run for a finished look. Sold in pairs; order one pair for each end.

**700MOCCAPR** (AGED BRASS)  
**700MOCCAPZ** (ANTIQUE BRONZE)  
**700MOCCAPS** (SATIN NICKEL)

# LOWER MONORAIL FROM THE CEILING

MonoRail’s design flexibility extends to all its components, including the ceiling mounting hardware. Options for both rigid and adjustable standoffs will put the rail right where you want it. Install the rail practically flush with the ceiling all the way down to an eight-foot drop.

No matter which type of standoff you choose, the hardware will complement the entire installation. Each part is available in two elegant finishes. Change the length of adjustable standoff without sacrificing the stylish and sophisticated look. Beauty and versatility are integral to every MonoRail component.

### TIPS:

- Use standoff supports at least every three feet of MonoRail run and at corners. Standoffs can be positioned to cover points where rails are joined.
- For best appearance, place the last standoff 4-6" from the end of the rail, and place standoffs symmetrically.

## RIGID STANDOFF

The field-cuttable rigid standoff is recommended for curvy runs or runs with heavier Heads and Pendants such as glass pendants. Rigid standoffs are compatible with various power feed options: Use the chart below to determine the appropriate standoff for your run.

To determine the shortest compatible standoff for any power feed or surface transformer option, see P. 28 and P. 30.

Heads and/or pendants must be selected and ordered separately. See a complete selection of compatible heads beginning on P. 70 and pendants on P. 102.

# ADDING POWER TO MONORAIL WITH POWER FEED CANOPIES

Products presented here will help power and assist in mounting a MonoRail system while maintaining the clean and elegant lines of the installation. The many options available will fit every installation need. Note: Power Feed Canopy options act as mounting plates only. For powering a MonoRail system, see Remote Transformers (P. 28) and Surface Transformers (P. 30).

# SURFACE TRANSFORMERS

An important mechanical feature with decorative design, Surface Transformers ensure that the correct amount of voltage runs through MonoRail lines to power each fixture. Transformers also aid in mounting the rail. The transformer's smoothly rounded housing keeps unsightly electrical lines and connectors hidden while complementing the parts it helps power.

## MINI SURFACE TRANSFORMERS (12V 250W)\*

The Mini Surface Transformer features a minimalist design and the industry's smallest 250 watt surface transformer. Constructed of die-cast aluminum. At 1.4 inches deep and 5.25 inches in diameter, it is the smallest 250 watt surface MonoRail transformer in the industry. It installs similarly to our existing SERIES of transformers and practically disappears on the MonoRail system. Mounts to a standard 4" ceiling junction box. Can be used with 2" or greater Standoffs (P. 27) and a Power Extender (below).

# SPECIAL INSTALLATIONS

The engineering and design behind MonoRail is inherently flexible. With thousands of possible configurations and plenty of customization options, you can easily create your own unique installation. MonoRail systems are also flexible enough to adapt to angular ceilings, and offer additional options to connect power sources.

## USING A DIRECT-END POWER FEED

These direct-end power feeds bring power from a remote transformer to the rail at an end of the run and mounts to a wall perpendicular to the run. Use with a single-feed remote transformer (P. 53).

### 4" ROUND DIRECT-END POWER FEED

Mounts to a standard 4" junction box with round plaster ring (provided by electrician).

**700MOP4CDZ** (ANTIQUE BRONZE)  
**700MOP4CDS** (SATIN NICKEL)

### 2" SQUARE DIRECT-END POWER FEED

Mounts to special 2" square junction box (included).

**700MOP2CDZ** (ANTIQUE BRONZE)  
**700MOP2CDS** (SATIN NICKEL)

## USING END AND CENTER POWER FEEDS

End and center power feeds are generally used to bring power to a MonoRail system when the transformer or junction box cannot be located directly above the run. The power feed can be mounted to a standard 4" junction box with round plaster ring (provided by electrician) or directly to a remote transformer (P. 53).

### END POWER FEED

The end power feed pushes into an end of the MonoRail and includes a removable 4" round canopy and 12' field-cuttable soft wire leads.

**700MOPENDZ** (ANTIQUE BRONZE)  
**700MOPENDS** (SATIN NICKEL)

### CENTER POWER FEED

The center power feed can be used anywhere within the run and includes a removable 4" round canopy and 12' field-cuttable softwire leads. Specify dual-feed when using a dual-feed transformer.

## USING A "T" OR "X" CONNECTOR

Use the special "T" or "X" connectors to make a clean splice into a straight horizontal rail run. These connectors are conductive, so you may power the system from any of the runs.

### "T" CONNECTOR

The "T" connector joins three pieces of MonoRail to form a "T". At least one standoff must be located near the connector.

**700MOCTTZ** (ANTIQUE BRONZE)  
**700MOCTTS** (SATIN NICKEL)

### "X" CONNECTOR

The "X" connector joins four pieces of MonoRail to form an "X". At least one standoff must be located near the connector.

**700MOCTXS** (SATIN NICKEL)

## INSTALLING TO A VAULTED CEILING

To install a MonoRail system to a vaulted ceiling, add a power vault adapter to each power feed and add a standoff vault adapter to each standoff.

### POWER VAULT ADAPTER

Installs to the power feed canopy or surface transformer (sold separately) and adjusts to any angle to position rail parallel to the floor.

**700MOPVLTZ** (ANTIQUE BRONZE)  
**700MOPVLTS** (SATIN NICKEL)

### STANDOFF VAULT ADAPTER

Installs between the rigid or adjustable standoff (sold separately) and the ceiling to position rail parallel to the floor. Includes several rod lengths to achieve the proper pitch when used with a surface transformer.

**700MOPORGZ** (ANTIQUE BRONZE)  
**700MOPORG2S** (SATIN NICKEL)

## INSTALLING TO CANTILEVER FROM A WALL

There are two types of outside riggers—one for power, one for support. Both types of outside rigger extend 36" from the wall and are field-cuttable.

### POWER OUTSIDE RIGGER

Supports and power feeds rail from a remote transformer. Includes 4" round canopy and 2" square canopy. Use with a single-feed remote transformer (P. 28).

**700MOPORGZ** (ANTIQUE BRONZE)  
**700MOPORG2S** (SATIN NICKEL)

### SUPPORT OUTSIDE RIGGER

Extends from the wall to support rail. Use at least every three feet of run.

**700MOSORGZ** (ANTIQUE BRONZE)  
**700MOSORG2S** (SATIN NICKEL)

## INSTALLING TO A T-BAR DROP CEILING

To install a MonoRail system to a T-bar drop ceiling, add a T-bar connector to every standoff (sold separately). The T-bar clip twists into the slot. (Use only if local electrical codes allow.)

### T-BAR CONNECTOR

Specify 15/16" or 9/16" slot.

**700MOTBARCB** (15/16", BLACK)  
**700MOTBAR9CB** (9/16", BLACK)

WALL MONORAIL

# WALL MONORAIL BASICS

## WHY CHOOSE WALL MONORAIL

The clean lines, simple design aesthetic and flexibility in application make a Wall MonoRail system the ultimate interior lighting tool. Creatively utilize wall space to complement the design architecture of any room. Bring light from wholly different angles. Solve lighting challenges from simple to complex Wall MonoRail systems can be configured in thousands of ways for a virtually limitless number of residential and commercial applications.

## ANATOMY OF WALL MONORAIL

For design harmony, all the power, standoff and fixture connections to the Wall MonoRail are shaped identically. Wall MonoRail is hand-bendable, field-cuttable and rated for 300 watts at 12 volts, 600 watts at 24 volts. Each piece of rail is shipped with conductive connectors to join rail pieces end to end. Order additional connectors if cutting and rejoining rails.

## BUILDING YOUR WALL MONORAIL SYSTEM

The first step in designing and building your Wall MonoRail system is determining what it is you are trying to light. Decide where to install the fixtures so the light goes where you want it. Choose fixtures then add the accessories you want. Your Wall MonoRail must be placed so it intersects the junction box with the power feed canopy.

### CUSTOM

For those do-it-yourself types, we offer custom orders. Choose every part and feature of your system, then configure it into your own unique installation. Take full advantage of the creativity and flexibility available in Wall MonoRail systems!

## TIPS FOR KEEPING IT SIMPLE

### TIP ONE

To calculate the amount of rail you'll need for an organic shape, draw the Wall MonoRail run to scale (for example, 1/4" = 1'). Use a piece of string to "trace" the drawing. Measure the length of string, then convert from your scale.

### TIP TWO

Power Feed Canopies work with Remote Transformers to power the light fixtures installed on the Wall MonoRail system. In addition to connecting with the power source, the Power Feed Canopy preserves the overall aesthetic of the system while saving space by keeping wiring out of sight behind its casing.

## COMPATIBLE FIXTURES

For design harmony, all the power, standoff, and fixture connections to the Wall MonoRail are shaped identically. Note that standoffs and fixtures can be positioned to cover where two rails are joined to maintain the smooth line.

# WALL MONORAIL

The engineering behind Wall MonoRail invites creative customization.

Solve easy or complex lighting challenges of accent lighting, showcasing artwork or finally finding the lighting to match that one room that never looks quite right.

The Wall MonoRail system mounts flexibly and securely with the Wall MonoRail Standoff. All the parts and pieces are here to make your own unique wall lighting system.

## TIPS:

- For best appearance, place the last standoff 4-6 inches from the end of the rail and place standoffs symmetrically.

# LINKING WALL MONORAIL FOR LONGER RUNS AND SHAPES

When one line of Wall MonoRail isn't enough for your space, just add more! Connect sections of rail to keep the line moving straight or going in a different direction. Choose to keep power flowing through the same line or isolate the new section in its own circuit. When you're done adding on, finish up with a decorative end cap to complete the picture.

KABLE LITE

# KABLE LITE BASICS

## WHY CHOOSE KABLE LITE

Offering an aesthetic that's minimalist and gives the impression of floating lights, a Kable Lite system provides unobtrusive yet flexible lighting options. This system is also useful for wall-to-wall lighting installations and when ceiling installations are not a practical option.

## ANATOMY OF KABLE LITE

Kable Lite Systems come with a thin wire upon which lights hang. Mounting hardware is similarly light yet provides sturdy anchoring. Like MonoRail systems, Kable Lite offers flexibility and creative options for adding and focusing lights.

## BUILDING YOUR KABLE LITE SYSTEM

The first step in designing and building your Kable Lite system is determining what it is you are trying to light. Decide where to install the fixtures so the light goes where you want it. Choose fixtures then add the accessories you want.

## TIPS FOR KEEPING IT SIMPLE

### TIP ONE

To calculate the amount of wire you'll need, draw the Kable Lite run to scale (for example, ¼" = 1"). Use a piece of string to "trace" the drawing. Measure the length of string, then convert from your scale.

### TIP TWO

It is possible to apply both accent lighting and ambient lighting simultaneously on a single Kable Lite system, even with design challenges such as widely spaced walls. Hanging pendants with heads that rotate and pivot add incredible reach in illumination. Consider the height from the floor to the wire to ensure there will not be obstructions.

## COMPATIBLE FIXTURES

For design harmony, all the power, standoff, and fixture connections to the Kable Lite system are shaped identically. Note that standoffs and fixtures can be positioned to cover where two rails are joined to maintain the smooth line. For other Kable Lite system options, such as mounting to a vaulted or T-bar ceiling or to a wall, see Special Installations on P. 55.

# KABLE LITE CUSTOM

The engineering behind Kable Lite invites creative customization. With tools for joining cables end-to-end with conductive or isolating connectors, you can add additional lines while separating their power sources. Take full control of where the light goes. Set the mood, complement the surroundings or just provide general illumination by making your own Kable Lite system. Solve easy or complex lighting challenges of accent lighting or finally finding the lighting to match that one room that never looks quite right.

# SUPPORTING KABLE LITE RUNS FROM CEILING OR WALL

Kable Lite's design flexibility extends to all its components, including the ability to anchor lines to the ceiling for flexible height installations. Install the line close to the ceiling or drop it down with up to 30 feet of cable.

## SUPPORTING RUNS OVER 20'

### ADJUSTABLE STANDOFF

Suspension cable virtually disappears for a clean and elegant look. Wire grip allows easy adjustability. Standard with twelve feet of field-cuttable suspension cable; may also be specified with thirty feet of cable. Horizontal rod is 12" wide; field cut to desired cable separation (3.5" minimum). Satin Nickel.

# ADDING POWER TO KABLE LITE WITH POWER FEED CANOPIES

Products presented here will help power and assist in mounting a MonoRail system while maintaining the clean and elegant lines of the installation. The many options available will fit every installation need. Note: Power Feed Canopy options act as mounting plates only. For powering a MonoRail system, see Remote Transformers (below) and Surface Transformers (P. 54).

## SINGLE-FEED CANOPIES

Use with one single-feed remote transformer

4" ROUND SINGLE-FEED\*

Mounts to Standard 4" junction box with round plaster ring (provided by electrician)

Compatible with any rigid standoff (P. 52)

Feed length: 24"

Add one pair of hardwire feeds (P. 54) to drop from ceiling greater than feed length

700KP4C24S (SATIN NICKEL)

2" SQUARE SINGLE-FEED\*

Mounts to special 2" square junction box (included)

Compatible with any rigid standoff (P. 52)

Feed length: 24"

Add one pair of hardwire feeds (P. 54) to drop from ceiling greater than feed length

700KP2C24S (SATIN NICKEL)

USE THESE CANOPIES WITH THESE TRANSFORMERS

## SURFACE TRANSFORMERS

An important mechanical feature with decorative design, Surface Transformers ensure that the correct amount of voltage runs through Kable Lite lines to power each fixture. Transformers also aid in mounting the rail. The transformer's smoothly rounded housing keeps unsightly electrical lines and connectors hidden while complementing the parts it helps power.

# SPECIAL INSTALLATIONS

The engineering and design behind Kable Lite is inherently flexible. With thousands of possible configurations and plenty of customization options, you can easily create your own unique installation. Mount from the ceiling or wall and choose to power the line from either spot. Set up intersecting runs for even more creative illumination possibilities.

## FEEDING POWER THROUGH A WALL OR CEILING

Use the power feed turnbuckles to pipe power from a single feed remote transformer (p. 53) through an accessible wall or ceiling and terminate the run. Power feed standoffs bring power to the cables within the run. Back of wall or ceiling must be accessible.

### POWER FEED TURNBUCKLES

Pair of insulated slimline turnbuckles with power feed capability. Minimum cable separation: 2"; maximum cable run: twenty feet, unless reinforced. Satin Nickel.

### POWER FEED STANDOFFS

Pair of rigid standoffs with power feed capability. Minimum cable separation: 3.5".

**700KPFSO02S** (2.5" DROP)  
**700KPFSOI12S** (12" DROP)

## MOUNTING TO BRICK, CEMENT, OR PLASTER

Turnbuckles and anchors come standard with mounting hardware for drywall. To mount to other surfaces, order this special hardware. Sold in pairs.

### BRICK OR CEMENT ANCHORS

**700PRTD14**

### PLASTER ANCHORS

**700PRTD15**

## CRISS-CROSSING CABLE RUNS

### POWER JUMPERS

Pair of power jumpers transfers power from one cable run to another. Includes 24" of insulating tubing to cover where cables cross. Satin Nickel.

### INSULATING TUBING

Clear plastic tubing insulates bare cable from another cable or metal. Sold by the foot.

## SUPPORTING CABLE ON RUNS WITH LONGER DROPS

Use these heavy duty standoffs to support Kable Lite systems that drop 18" or 24" from the ceiling.

### HEAVY DUTY STANDOFFS

These longer standoffs have 4" diameter bases for stability and require a minimum 5.5" cable separation. Pair included. Not field-cuttable. May require longer hardwire feeds (P. 54).

**700KSOHD24S** (24" LENGTH)

## MAINTAINING TENSION IN TURN-HEAVY RUNS

Kable Lite systems with several turns will require inline turnbuckles to provide tension within the run.

### INLINE TURNBUCKLES

Conductive (T2) turnbuckles continue power; insulated (T3) turnbuckles isolate power feeds from each other. Pair included.

**700PARTT2S** (CONDUCTIVE)  
**700PARTT3S** (INSULATED)

## USING A CENTER POWER FEED

A center power feed is generally used to bring power to a Kable Lite system when the transformer or junction box cannot be located directly above the run. The power feed can be mounted to a standard 4" junction box with round plaster ring (provided by electrician), directly to a Remote Transformer, or Kable Lite Surface Transformer when the available junction box is not located directly above the run.

### CENTER POWER FEED

The center power feed can be used anywhere within the run and includes 12' field-cuttable softwire leads. Specify single or dual-feed. Specify dual-feed when using a dual-feed transformer.

**700KPCENS** (SINGLE FEED)  
**700KPCEN4S** (DUAL FEED)

## BUILDING YOUR BROX SYSTEM

Brox is an easy-to-install system with components that snap together and lock into place with simple Allen screws.

### FOLLOW THESE GUIDELINES TO PLAN AND BUILD YOUR SYSTEM:

1. Continuous runs over 45 feet require an additional driver and isolated connector. For support, consult the Quotes Department by phone at 847.410.4666 or email [quotes@visualcomfort.com](mailto:quotes@visualcomfort.com)
2. Configurations between 1-8 feet require a minimum of two suspension points. Larger systems require additional suspension support every eight feet.
3. General Support Rules:
  - a. 1 Support at each top-plane, rail-to-rail connection point
  - b. 1 Support for every 8-foot horizontal run (top-plan)
  - c. 1 Support at the top-most rail every 16' of vertical run

Low-voltage power flows from one Brox component to the next. For larger installations requiring multiple power feeds, the Visual Comfort Quotes team can help with layouts and create shop drawings.

Brox connectors allow you to design your system with multiple dimensions at any 90° angle.

Remote Driver

Surface Driver

Choose between two options to supply power to your Brox system - a minimal ceiling approach with the remote driver option or if access above your ceiling is limited the surface canopy option.

Use connectors to drop power to your system or link long runs together.

Supports at each corner maintain a secure and level system. If placed directly on the Light Bar, rotation is limited to every 90°.

Support can be mounted on the connector to allow for 360° rotation.

**360°  
ROTATION**

Light Bars rotate 360° to aim light in your preferred direction.

Vertical and Horizontal Light Bars also available as Blank Bars.

Finish each run with an end cap.

Wall Connector provides design flexibility to mount light bars on wall or ceiling.
